

Requirements Documentation

Vaidehi Gouda

May 25, 2026

1 Requirement Gathering

This section talks about the requirements gathered from various stakeholders.

1.1 User Requirements

- An App that's easy to navigate, safe to enter my personal and banking details. I should trust the app with payment as I am adding my banking details.
- I should be able to view a dress's clear image from 4 sides, the exact color, size, material mentioned.
- I should also be able to see how it looks on me in the simulation.
- I want various Categorisation like summer-winter collections, festival specials, discounted dresses etc.
- A Proper Search Bar where I can enter my category of choice and it should show me relevant searches.
- I would be happy to see price comparison with other apps.
- I should be able to track my order.
- I should not receive wrong order. And should be easily able to return the wrongly shipped order if any.

1.2 Owner

- A platform to showcase all dresses of TF to the customers.
- 40k, 10k 5 months
- TF should be able to make a 10% of the total TF's profit via the app.
- In the 1st quarter achieve 20% sales, 2% conversion rates from downloads to purchases
- In competition with existing online shopping apps, TF Store (app) should record download of 50k in the 1st month, 60k in the 2nd month and so on. By the end of 6 months aim for 5L downloads and 2L customer profiles to be created
- Aim to engage customers on the app by 40 to 50 mins per week
- Development must stay within the allocated budget

1.3 Manager/ Financial requirements

- 2BA, 10 dev team, 10 testers, processor laptops, monitor to each
- Monthly meeting with BA and dev head, head of all teams and TF owner
- Weekly evaluations

1.4 Storehouse staff

- Absolute synchronization between the brick-and-mortar shelf stock and the app inventory to avoid overselling.

1.5 Website admin

- Should be able to upload the product photo (5), description, price of each item.
- Download reports regarding category wise sales, and other custom.
- Should track each order.
- Should have an update of the inventory

1.6 Payment gateway providers

- Strict adherence to data security standards
- Secure API Integration: Stable, encrypted communication tokens between the app frontend and their payment servers.
- Prevention Data:

1.7 Dev/ Test team

- Well-defined user stories and acceptance criteria before coding begins.
- Scalable Architecture

1.8 Packing/ shipping team

- We should get correct order details
- Correct address of shipping
- Clearance to ship
- Packing materials (cardboard boxes, papers, thermocols, sheets etc)
- The trucks in proper condition

1.9 Marketing/ Sales

- Budget for ads
- Sales report, most- least sold items
- Ad approvals

1.10 Customer service

- Integration showing a customer's entire order history, app activity, and support chat log on one screen.
- A direct communication channel to help customers resolve sizing or checkout issues in real-time.
- Customer service communication time should be 7am to 9pm, not late nights

1.11 Law regulators

- Comply with mobile viewing standards

1.12 TF employees

- Paid/ salary on time
- Flexible working hours and fixed work period
- No overtime

2 Requirements

- Build an app named "TF store" that helps the TF to showcase its dress and makes sales via the app. An expected 10%profit from this medium of sales.

The customer end

- An attractive app with browsing options- The app must have an attractive homepage. There should be various categories to browse, a search bar. Categorise as men, women, kids, festive seasons, based on colors.
- Each item described briefly- An apparel must have 5-7 photos, each in different angle, the name, color, size, materials used, price should be indicated just below the dress. All images should be actual none should be generated or copied from elsewhere. There should be purchase and add to cart option below these details.
- Create user profile- To create the user profile should have compulsory and optional information. Compulsory information must include username, password, customer's name, phone, email, address with pinned map location, whereas optional includes their favorites list, preferred category, color and size.
- Purchase process- Once the user clicks buy option, it should take user to the next page that has details of the items to be purchased, if all the details are correct go to the next page that has all the saved addresses, choose the correct shipping address or choose a new address. After this details are correct go to the next page, choose the payment method or add a new one. Choose a payment option. Go to the payments page, make payment, redirect back to the app. Show the details of purchased goods.
- Notify for the purchased items- Send email notification of the shipped items with a real time order tracking link.

For the app

- Secure and authorised database- The app should have a secure database to store the customer details. Only the authorised should have access.
- Not a massive app- the app must not take too much of the mobile storage space or that gets stuck frequently.
- Secure payment- A secure payment gateway should be interfaced not leading to any wrong transactions from either side.

On the admin end,

- Ease of adding product details- they should be able to add photos of the dress and add other details for that dress.
- Download reports- They should be able to download various reports like sales, revenue and profit. They should be able to get the stats of number of browses, purchases etc.

On Customer service,

- Proper communication from the customer- We should be able to receive customer query/ complain correctly. We should get proper communication in the form of email or call or complain via the app.

- Query order details- We should get the customer order details to reply to their query.
The business,
- 10%Profit and 20%Sales- TF should be able to make a 10% of the total TF's profit via the app. In the 1st quarter achieve 20% sales, 2%conversion rates from downloads to purchases
- Number of downloads in 6 months- In competition with existing online shopping apps, TF Store (app) should record download of 50k in the 1st month, 60k in the 2nd month and so on. By the end of 6 months aim for 5L downloads and 2L customer profiles to be created
- Time spent per week on the app- Aim to engage customers on the app by 40 to 50 mins per week
- Stay within the budget- Development must stay within the allocated budget

3 Requirement Analysis

3.1 Gap Analysis

- Strategies/ Goals/ Objectives- Build an online shopping application that is ease to navigate, has sufficient product information. It must not lag while using, must store the user information and payment information securely. It should be a remote shopping experience than just a shopping app. We must attract new-age customers. Aim for a 10%increase in the profit in 7months from app launch. Customer queries must be addressed.
- Existing process and Resources- TF is a garments shop. Customers should visit this shop for purchase. Inside the shop are store staff helping customers with showing dresses, giving necessary information, billing and packing. Also the storeroom has staff manually keeping record of the items inside the storeroom, putting items in the show rack when needed. The accounts section keeps record of all the finance related transactions, monthly reports, profit-loss statements. There are manager and owner. There is a development environment, a small enthusiastic IT team.
- Future State- A remote shopping experience to the customers with sufficient information about the items. The customer should be able to browse through different categories promising variety. Shopping must happen in less and easy steps. One time email, phone verification. Secure database with user profile data, payment data and secure transactions every time. After the payment a confirmation should be given. Deliver right goods to right customers not taking too much time. 10% of the total profit should come from the app.
- Gap analysis-
We need to build a shopping app that helps connect with new age customers, with a secure database. We need a packing unit that efficiently packs and keeps record of the goods sent and received. Efficient delivery partners who are reliable, well- behaved and should drive safely. Customer service team with the knowledge of answering customer queries in the app, resolving any complaints and keep track of the complaints registered, solved, unsolved with timely response and good behavior. Hire more developers, testers and admin in the IT team. A bigger developing environment with some more facilities. We need more packing and labeling materials.

3.2 Capability Assessment

- What do we have?
An IT development team
A store that can dispatch clothes
Stat and management team for keeping record of sales, tax, profit-loss, monthly reports
- What we need?
A more facilitated developing environment, cybersecurity team
Packaging wing with more packing tools and materials.
Staffs for inventory management, and record keeping. Return, refund to be handled
Training staff on how to use the online platform

Secure database, secure transactions
24X7 customer support

Requirements ID	Requirements Desc	Type	Source
REQ001	An attractive app with browsing options	f	User
REQ002	Each item described briefly	f	user
REQ003	There should be purchase and add to cart option below these details	f	user
REQ004	Create user profile	f	user
REQ005	Purchase process	f	user
REQ006	Notify for the purchased items	f	user
REQ007	Secure and authorised database	F	Dev, Tester
REQ008	Not a massive app	F	Dev, Tester
REQ009	Secure payment	F	User, Dev
REQ010	Ease of adding product details	F	Admin
REQ011	Download reports and stats	F	Admin, manager
REQ012	Proper communication from the customer	F	Customer service

REQ014	10%Profit and 20%Sales	Business	Owner
REQ015	Number of downloads in 6 months	Business	Owner
REQ016	Time spent per week on the app	Business	Owner
REQ017	Stay within the budget	Business	Owner

Your introduction goes here! Simply start writing your document and use the Recompile button to view the updated PDF preview. Examples of commonly used commands and features are listed below, to help you get started.

Once you're familiar with the editor, you can find various project settings in the Overleaf menu, accessed via the button in the very top left of the editor. To view tutorials, user guides, and further documentation, please visit our [help library](#), or head to our plans page to [choose your plan](#).

4 Some examples to get started

4.1 How to create Sections and Subsections

Simply use the section and subsection commands, as in this example document! With Overleaf, all the formatting and numbering is handled automatically according to the template you've chosen. If you're using the Visual Editor, you can also create new section and subsections via the buttons in the editor toolbar.

4.2 How to include Figures

First you have to upload the image file from your computer using the upload link in the file-tree menu. Then use the `\includegraphics` command to include it in your document. Use the figure environment and the caption command to add a number and a caption to your figure. See the code for Figure 1 in this section for an example.

Note that your figure will automatically be placed in the most appropriate place for it, given the surrounding text and taking into account other figures or tables that may be close by. You can find out more about adding images to your documents in this help article on [including images on Overleaf](#).

Item	Quantity
Widgets	42
Gadgets	13

Table 1: An example table.

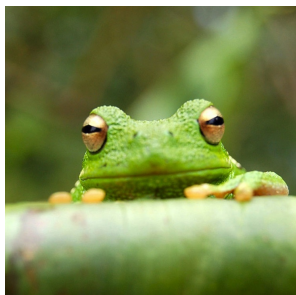

Figure 1: This frog was uploaded via the file-tree menu.

4.3 How to add Tables

Use the table and tabular environments for basic tables — see Table 1, for example. For more information, please see this help article on [tables](#).

4.4 How to add Comments and Track Changes

Comments can be added to your project by highlighting some text and clicking “Add comment” in the top right of the editor pane. To view existing comments, click on the Review menu in the toolbar above. To reply to a comment, click on the Reply button in the lower right corner of the comment. You can close the Review pane by clicking its name on the toolbar when you’re done reviewing for the time being.

Track changes are available on all our [premium plans](#), and can be toggled on or off using the option at the top of the Review pane. Track changes allow you to keep track of every change made to the document, along with the person making the change.

4.5 How to add Lists

You can make lists with automatic numbering ...

1. Like this,
2. and like this.

...or bullet points ...

- Like this,
- and like this.

4.6 How to write Mathematics

$\text{\LaTeX}$ is great at typesetting mathematics. Let $X_1, X_2, \dots, X_n$ be a sequence of independent and identically distributed random variables with $E[X_i] = \mu$ and $\text{Var}[X_i] = \sigma^2 < \infty$, and let

$$S_n = \frac{X_1 + X_2 + \dots + X_n}{n} = \frac{1}{n} \sum_i^n X_i$$

denote their mean. Then as n approaches infinity, the random variables $\sqrt{n}(S_n - \mu)$ converge in distribution to a normal $\mathcal{N}(0, \sigma^2)$.

4.7 How to change the margins and paper size

Usually the template you're using will have the page margins and paper size set correctly for that use-case. For example, if you're using a journal article template provided by the journal publisher, that template will be formatted according to their requirements. In these cases, it's best not to alter the margins directly.

If however you're using a more general template, such as this one, and would like to alter the margins, a common way to do so is via the `geometry` package. You can find the `geometry` package loaded in the preamble at the top of this example file, and if you'd like to learn more about how to adjust the settings, please visit this help article on [page size and margins](#).

4.8 How to change the document language and spell check settings

Overleaf supports many different languages, including multiple different languages within one document.

To configure the document language, simply edit the option provided to the `babel` package in the preamble at the top of this example project. To learn more about the different options, please visit this help article on [international language support](#).

To change the spell check language, simply open the Overleaf menu at the top left of the editor window, scroll down to the spell check setting, and adjust accordingly.

4.9 How to add Citations and a References List

You can simply upload a `.bib` file containing your BibTeX entries, created with a tool such as JabRef. You can then cite entries from it, like this: [\[Gre93\]](#). Just remember to specify a bibliography style, as well as the filename of the `.bib`. You can find a [video tutorial here](#) to learn more about BibTeX.

If you have an [upgraded account](#), you can also import your Mendeley or Zotero library directly as a `.bib` file, via the upload menu in the file-tree.

4.10 Good luck!

We hope you find Overleaf useful, and do take a look at our [help library](#) for more tutorials and user guides! Please also let us know if you have any feedback using the **Contact us** link at the bottom of the Overleaf menu — or use the contact form at <https://www.overleaf.com/contact>.
